EDUCATION AND TRAINING

Bachelor of Science in Computer Science

Bilkent University, Faculty of Engineering **[2021 – 2026]**

WORK EXPERIENCE

JOTFORM / Backend Support Engineer [10/2025 – 06/2026]

As a Backend Support Engineer at Jotform, I am responsible for maintaining the technical integrity and performance of a global-scale platform through the development and optimization of robust RESTful APIs and backend services using PHP. My role entails managing high-concurrency system operations, where I implement efficient server-side logic and oversee automated background processes, utilizing Redis workers and cron jobs, to ensure continuous system reliability and data consistency. I actively collaborate with cross-functional engineering teams to architect and refine complex financial modules, specializing in the integration of third-party payment gateways such as PayPal and Square. Furthermore, I leverage AI-driven strategies to automate backend workflows and enhance the efficiency of large-scale data retrieval, bridging the gap between advanced computational theory and production-ready software solutions.

JOTFORM / Backend Development Intern [06/2025 – 07/2025]

During my tenure as a Backend Development Intern, I contributed to the engineering of scalable server-side modules and enhanced database structures within a production environment. I gained significant experience in maintaining enterprise-level codebases, where I focused on debugging critical system components and participating in technical sprints to improve overall backend efficiency. This experience allowed me to bridge the gap between academic theory and the practical demands of high-traffic software applications.

NETAŞ / Cloud Services Intern [07/2025 – 08/2025]

In my role as a Cloud Services Intern, I focused on the exploration and management of cloud infrastructure and deployment strategies within a large-scale corporate environment. I assisted the cloud services team in monitoring system performance and participated in projects centered on cloud-native technologies. My responsibilities included supporting the automation of deployment workflows, which deepened my understanding of modern DevOps practices and scalable infrastructure.

Creasur Tech / Game Developer Intern [06/2024 – 07/2024]

As a Game Development Intern, I engineered interactive mobile gameplay mechanics using C# and the Unity engine. I was responsible for implementing physics-based systems and complex level management logic for various mobile projects, such as a randomized shell-finding game and a bowling simulation utilizing Rigidbody physics. Through these projects, I refined my skills in object-oriented programming and algorithmic logic to create engaging, high-performance user experiences.

PROJECTS

Element Crash A Royal Match–style match puzzle built in Unity 6. Tap connected groups of same-colored cubes to clear them within a move limit. Larger groups become rockets or TNT, and the board includes stones, vases, and chalice boxes. Written in C# with a model/view split and JSON-driven levels.

Link: https://www.farabisinasari.com/projects/element-crash

Swordman A top-down 2D arena brawler for four fighters. Swords picked off the ground orbit you and hit on contact, there is no attack button. Blade clashes break both swords, a body hit costs one of three hit points, and a kill pays a three-sword bounty. Built in Unity 6 with C#, URP 2D, and Physics2D.

Link: https://www.farabisinasari.com/projects/swordman

Gamble Wheel A push-your-luck wheel-of-fortune game for Android, built in Unity 2021.3 LTS. Spin for growing rewards, risk a bomb that wipes the run, and cash out only on bomb-free silver and golden zones. Written in C# with an MVP architecture, DOTween, and TextMeshPro.

Link: https://www.farabisinasari.com/projects/wheel-gamble

Legend of the Forest A 2D top-down action RPG built in Unity 6. Three weapons, a stamina-based dash, enemies with distinct attack patterns, destructible props, and fade transitions between scenes. Written in C# with URP, Cinemachine, the New Input System, ScriptableObjects, and 2D Tilemaps.

Link: https://www.farabisinasari.com/projects/action-rpg

Three Shell Game Unity mobile game built during the Creasaur internship. Implements the classic shell game with a ball hidden under one of three cups and randomized movements; players score by picking the correct cup. Game loop, animations, and score management structured with modular C# scripts.

Link: https://github.com/farabisina25/three_shell_game

Bowling Game Physics-driven bowling simulation in Unity. Ball–pin collisions modeled with Rigidbody physics; levels complete when all pins fall, with progressively increasing difficulty. Built level progression, physics tuning, and game state management during the Creasaur internship.

Link: https://github.com/farabisina25/bowling_game

Football Draft - Fantasy Squad Game Turn-based football draft game with wheel-based team selection, unique player pool drafting, and turn tracking. PHP/MySQL backend for session management, JavaScript frontend for interactive UI, and LocalStorage for client-side state persistence.

Link: https://github.com/farabisina25/football-app

Unicorn – **Roommate Matching Platform** Bilkent CS102 capstone project. Android app that matches students based on lifestyle, music taste, and daily habits. Firebase Authentication for identity, Realtime Database for cloud-synced profiles and events; includes roommate matching, social connections, and used textbook marketplace modules.

Link: https://github.com/farabisina25/CS102-Project-Unicorn

EchoFinder — **AI GitHub Issue Bot** Bilkent CS458 capstone project. Probot-based bot for semantic duplicate detection on GitHub issues. Sentence-BERT embeddings generated in a FastAPI microservice, similarity search with PostgreSQL + pgvector, and Google Gemini for merge previews. Multi-service deployment via Docker Compose.

Link: https://github.com/farabisina25/echofinder-test

CS319 Full-Stack Web Application Bilkent CS319 capstone project. Three-tier full-stack architecture with a Node.js REST API, React SPA, and PostgreSQL. Covers authentication, relational data modeling, and end-to-end web development with a clear frontend–backend separation.

EXAM RESULTS

TOEFL IBT

I took the TOEFL iBT examination on November 22, 2025, achieving an overall score of 96 out of 120, which corresponds to the C1 advanced proficiency level on the CEFR scale. My sectional performance reflects strong English competency across all areas, highlighted by an exceptional Listening score of 29/30 and a Writing score of 25/30.

YKS

Ranked 4264 out of 2.1 million test-takers in nationwide university entrance exam YKS
